

# VAHYDRO-GW: MAINTENANCE

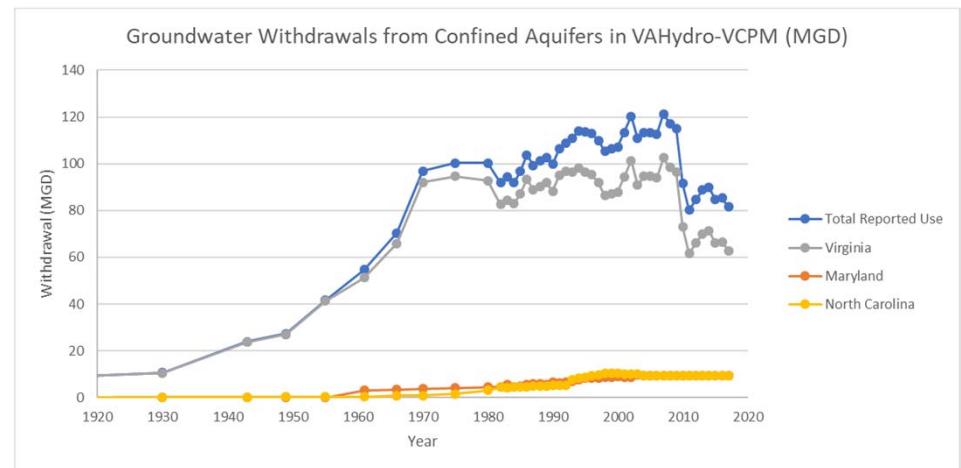

- VCPM Adaptation
  - 2013 Updated and adapted for DEQ use
    - 2003 -2012 data
    - RU and TP created
    - Critical surface
  - 2015-16 RU and TP updated
  - 2016 Addition of SUB package
  - 2016-17 RU and TP updated
  - 2017-18 RU and TP updated

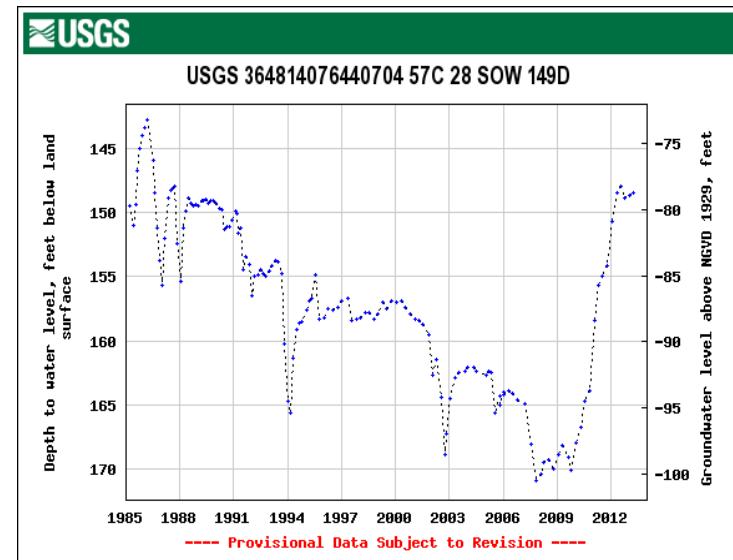

- 1-2 year occurrence:
  - Pumping values updated
  - Measured heads updated
  - Recharge values updated
- 2-10 year occurrence:
  - Boundary conditions updated
  - Hydraulic parameters recalibrated
  - Updated geologic framework
- 10+ occurrence :
  - Model overhaul

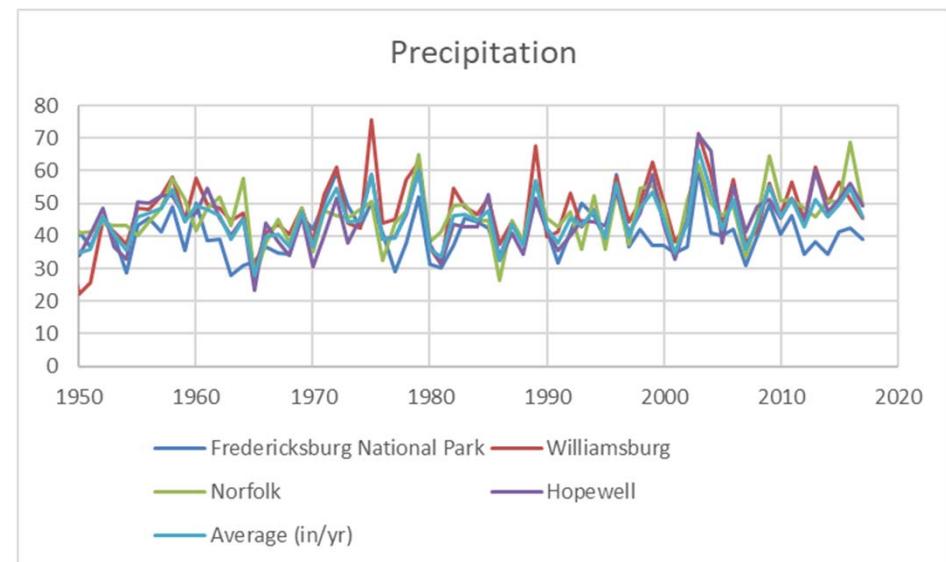

- 1-2 year occurrence:
  - Pumping values updated - **2018**
  - Measured heads updated
  - Recharge values updated
- 2-10 year occurrence:
  - Boundary conditions updated
  - Hydraulic parameters recalibrated
  - Updated geologic framework
- 10+ occurrence :
  - Model overhaul

- 1-2 year occurrence:
  - Pumping values updated - **2018**
  - Measured heads updated – **in progress**
  - Recharge values updated
- 2-10 year occurrence:
  - Boundary conditions updated
  - Hydraulic parameters recalibrated
  - Updated geologic framework
- 10+ occurrence :
  - Model overhaul

- 1-2 year occurrence:
  - Pumping values updated - **2018**
  - Measured heads updated – **in progress**
  - Recharge values updated – **2018**
- 2-10 year occurrence:
  - Boundary conditions updated
  - Hydraulic parameters recalibrated
  - Updated geologic framework
- 10+ occurrence :
  - Model overhaul

- 1-2 year occurrence:
  - Pumping values updated - **2018**
  - Measured heads updated – **in progress**
  - Recharge values updated – **2018**
- 2-10 year occurrence:
  - Boundary conditions updated – **upcoming**
  - Hydraulic parameters recalibrated
  - Updated geologic framework
- 10+ occurrence :
  - Model overhaul

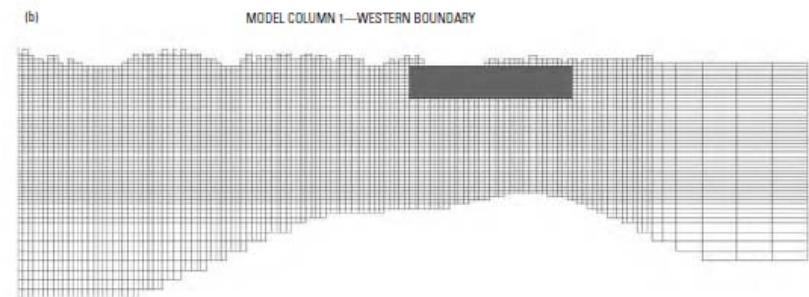

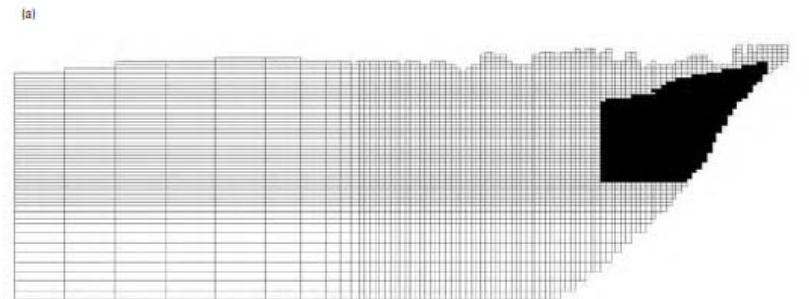

Figure 12. Finite-difference model grid showing cells designated for (a) time-varying specified flux to Maryland in row 1 and (b) constant specified flux from the Piedmont Province in columns 4–20.

- 1-2 year occurrence:
  - Pumping values updated - **2018**
  - Measured heads updated – **in progress**
  - Recharge values updated – **2018**
- 2-10 year occurrence:
  - Boundary conditions updated – **upcoming**
  - Hydraulic parameters recalibrated – **upcoming**
  - Updated geologic framework
- 10+ occurrence :
  - Model overhaul

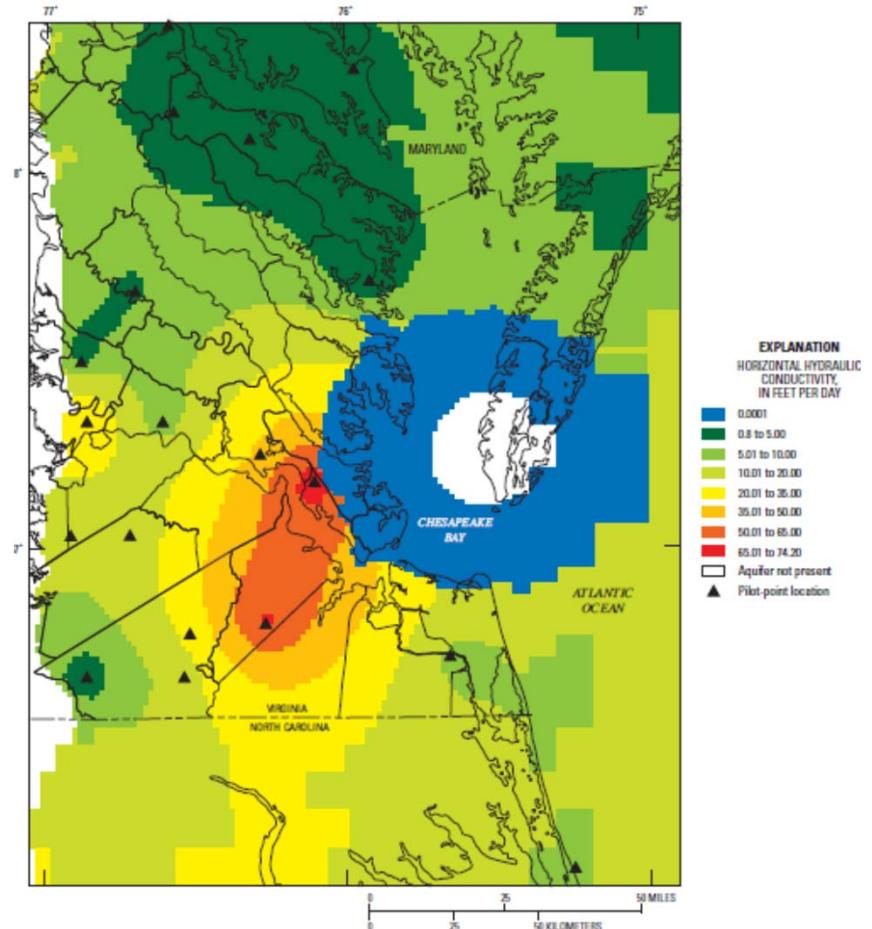

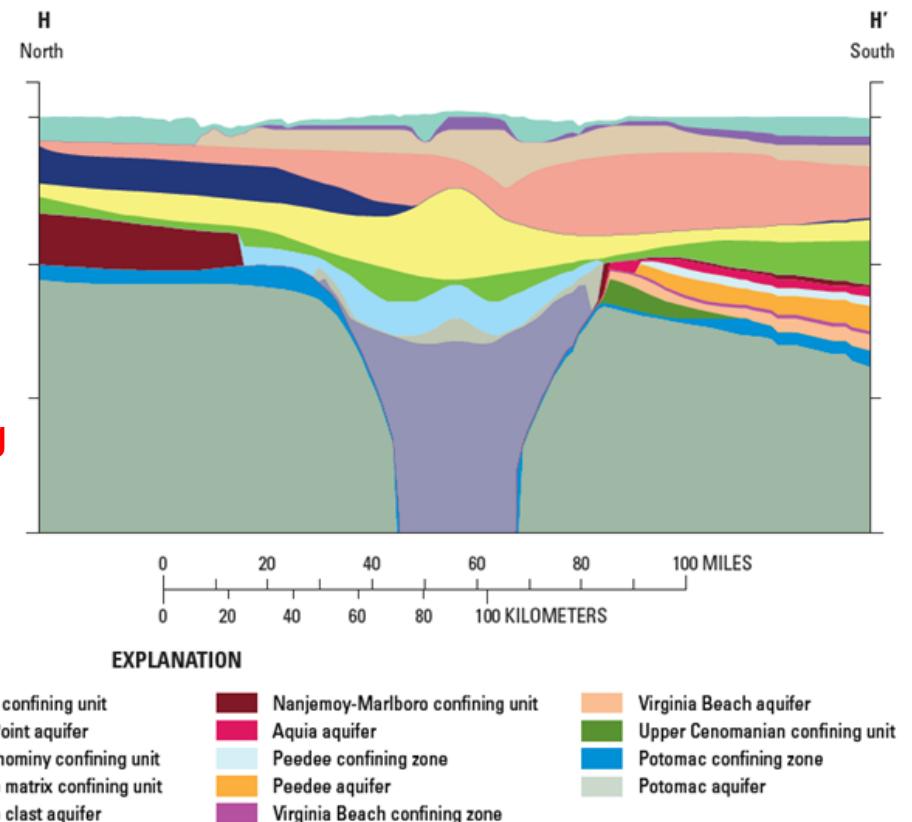

Figure 13. Pilot-point locations and simulated horizontal hydraulic conductivity at the top of the Potomac aquifer of the Virginia Coastal Plain.

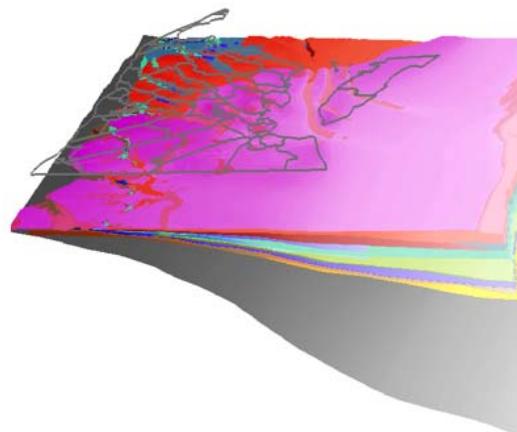

- 1-2 year occurrence:
  - Pumping values updated - **2018**
  - Measured heads updated – **in progress**
  - Recharge values updated – **2018**
- 2-10 year occurrence:
  - Boundary conditions updated – **upcoming**
  - Hydraulic parameters recalibrated – **upcoming**
  - **Updated geologic framework – in progress**
- 10+ occurrence :
  - Model overhaul

- Model\Framework

- 60-layer constant elevation.
- 19 hydrogeologic units
- HUF Package
  - 38 grid independent arrays

## DATA COMPILATION

Point elevations for the hydrogeologic units are contained in the ARC point feature “logpicks\_04”, and were interpreted from borehole geophysical, lithologic, and ancillary data. The point feature was generated from a dbase table “picks\_table\_04” that includes all boreholes within the Virginia Coastal Plain for which geophysical logs exist in established site files as of through most of 2004. The following status codes appear for each site in the table and point feature:

- 0 – ESTABLISHED SITES UNINTERPRETED
- 1 – INTERPRETATIONS OF ESTABLISHED SITES MADE DURING 2003 OF SITES IN SOUTHEASTERN VIRGINIA
- 2 – INTERPRETATIONS MADE INITIALLY OF ESTABLISHED SITES IN THE NORTHERN NECK AND MIDDLE PENINSULA (FY 2001) AND FALL ZONE (FY 2002), AND MODIFIED DURING FY 2003 WHILE BEING COMBINED WITH ESTABLISHED SITES IN SOUTHEASTERN VIRGINIA
- (3 – WAS PREVIOUSLY DESIGNATED FOR INTERPRETATION REQUIRING RE-EVALUATION, HAS SINCE FALLEN UNDER 4 OR 6 BELOW AND NO LONGER APPEARS IN TABLE OR POINT FEATURE)
- 4 – ESTABLISHED SITES INTERPRETATION CHANGED OR ADDED DURING FY 2004
- 5 – SITES NEWLY ESTABLISHED AND INTERPRETED DURING FY 2004
- 6 – EARLIER INTERPRETATION DISCARDED DURING FY 2004 OR SITE OMITTED BECAUSE OF POOR DATA QUALITY
- 7 – BASEMENT CONTROL ONLY

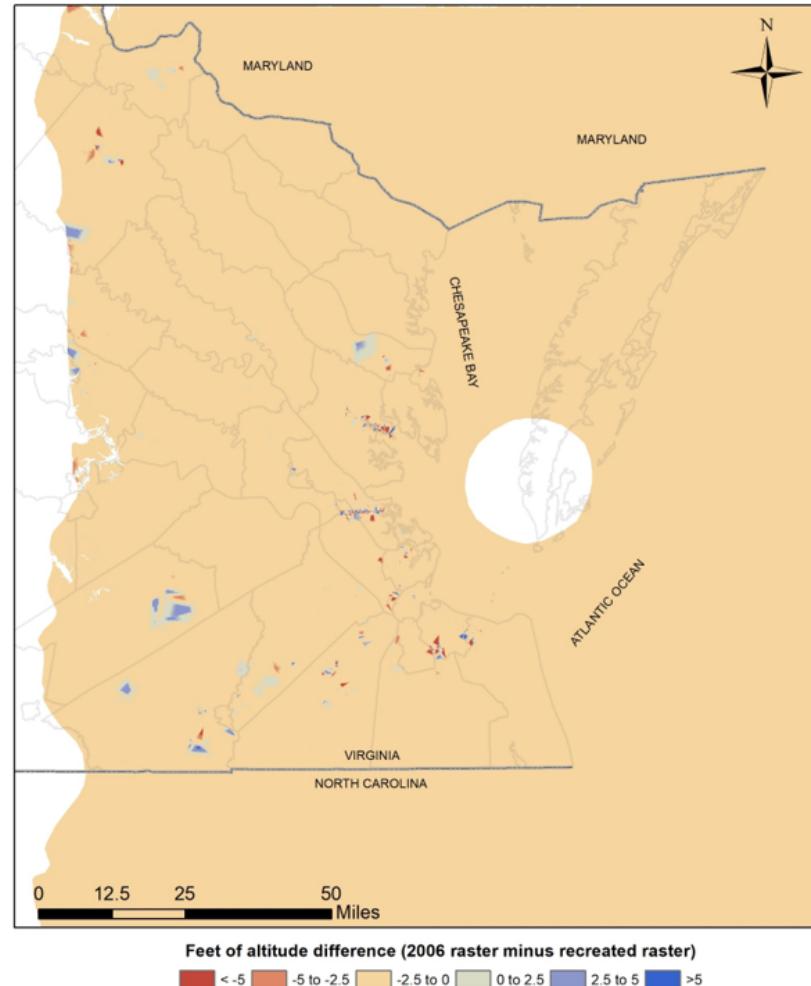

All points with a value of other than 0 or 6 were included in subsequent analyses. The majority of points with a value of 0 are shallow wells solely in the Yorktown-Eastover aquifer in far southeastern Virginia. Among all wells deep enough to reach the Potomac aquifer approximately 30 remain not included because of time constraints, with the majority in Southampton and Isle of Wight Counties.

Based on the point elevations, ARC line features were hand digitized to initially delineate top-surface configurations of each hydrogeologic unit along with the basement bedrock. Separate polygon features depicting the estimated extents of the units also were hand digitized. The point, line, and polygon features were developed sequentially during distinct, geographically based phases of investigation including the Northern Neck and Middle Peninsula (2001), Fall Zone (2002), and southeastern Virginia and the York-James Peninsula (2003). A separate interim effort also was undertaken during 2002 to extrapolate the line features into northeastern North Carolina, across the Delmarva Peninsula, and offshore beneath the continental slope, based generally on published information for those areas. During the summer of 2003, features produced during the earlier separate phases were combined to represent the entire Virginia Coastal Plain along with adjacent areas in adjoining states and offshore. The structural-contour line features were augmented with artificial “extender” contours purposefully placed beyond the margins of the hydrogeologic units, so that further refinement of the top surfaces of the units during subsequent analyses could be generated up to the margins.

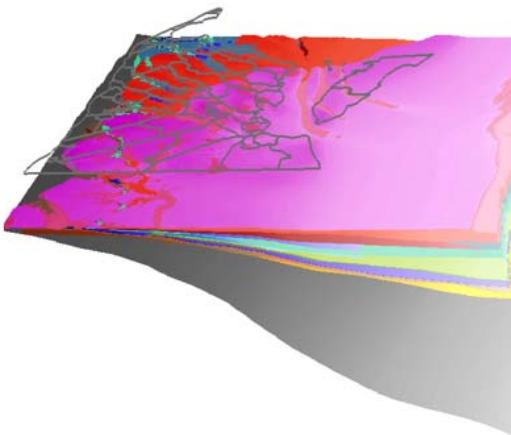

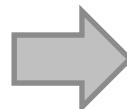

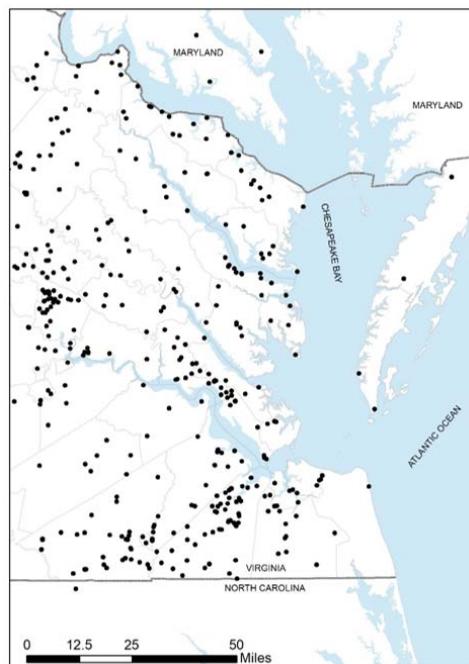

Subsequent analyses were undertaken during the summer of 2003 to quantitatively depict aerially continuous surfaces representing the top surfaces of the hydrogeologic units and basement bedrock (see following section). Numerical operations performed on each unit were organized and analyzed in ARC Map. During 2004, point data were

- Automated reproduction of original rasters
  - Points & contours -> TIN
  - TIN - > raster
  - Clip raster to originals
  - Adjust using incision surface
  - Adjust for interpolation below lower units
  - Add control points
